Oct 20, 2026

Meeting Oct 20, 2026 at 12:36 PST

Meeting records Transcript

Summary

Discussion covering AI search optimization, email assistants, and project criteria integration for lead generation workflows.

AI Search and Email Tools
Optimization strategies improved visibility via AI models. Email assistant configuration enabled direct response options.

Project Criteria and Lead Generation
Office project criteria established parameters for research tools. HubSpot integration streamlined data transfer and lead generation.

Database and Technical Logistics
Database requirements addressed filtering needs for trigger events. Follow-up meetings were scheduled for technical alignment.

Decisions

Needs Further Discussion

- **Creation of a trigger event research tool** The participants discussed building an automated research tool to identify target company trigger events based on specific criteria, with ongoing ideation.
- **Integration of Property Daily data with HubSpot** The participants debated and deferred final integration testing for connecting Property Daily data into HubSpot until credentials are provided and reviewed.

Aligned

- **Development of an AI email assistant** The participants agreed to explore creating an AI-powered email response assistant tool within the Microsoft/Outlook subscription co-pilot functionality.
- **Scheduling a follow-up meeting** The participants agreed to hold their next follow-up call at 8:30 a.m. Australian time tomorrow.

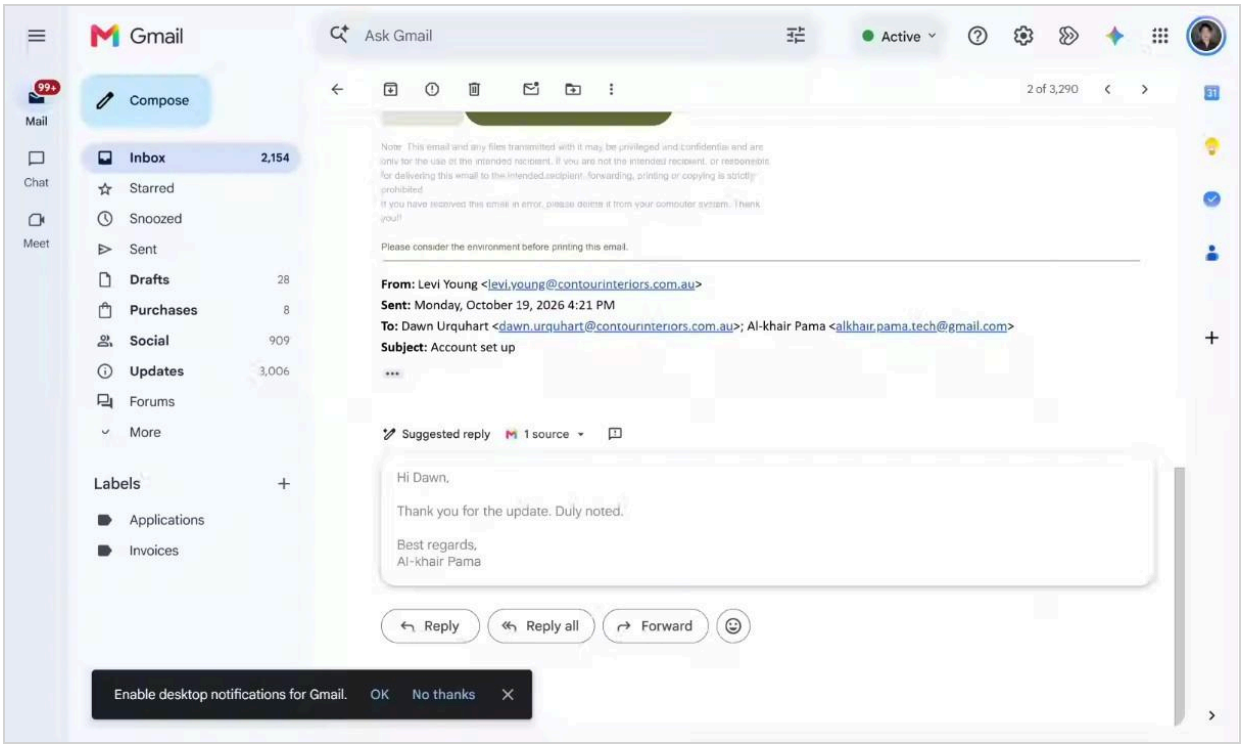

Next steps

- ☐ [Al-khair Pama] Set Up Accounts: Set up HubSpot and Outlook accounts to enable initial AI testing and email integration.
- ☐ [Levi Young] Send Credentials: Send login credentials for Property Daily and the company criteria documentation to facilitate research and integration planning.
- ☐ [Al-khair Pama] Schedule Follow-up: Draft and send an invitation for a meeting scheduled at 8:30 AM Australian time for tomorrow.
- ☐ [Levi Young] Coordinate Marketing Meeting: Organize a meeting with the marketing representative for tomorrow or Friday to discuss AI search optimization assistance.
- ☐ [Ree] Provide Claude Access: Add Al-khair Pama to the Claude account to provide access to the AI tool.

Details

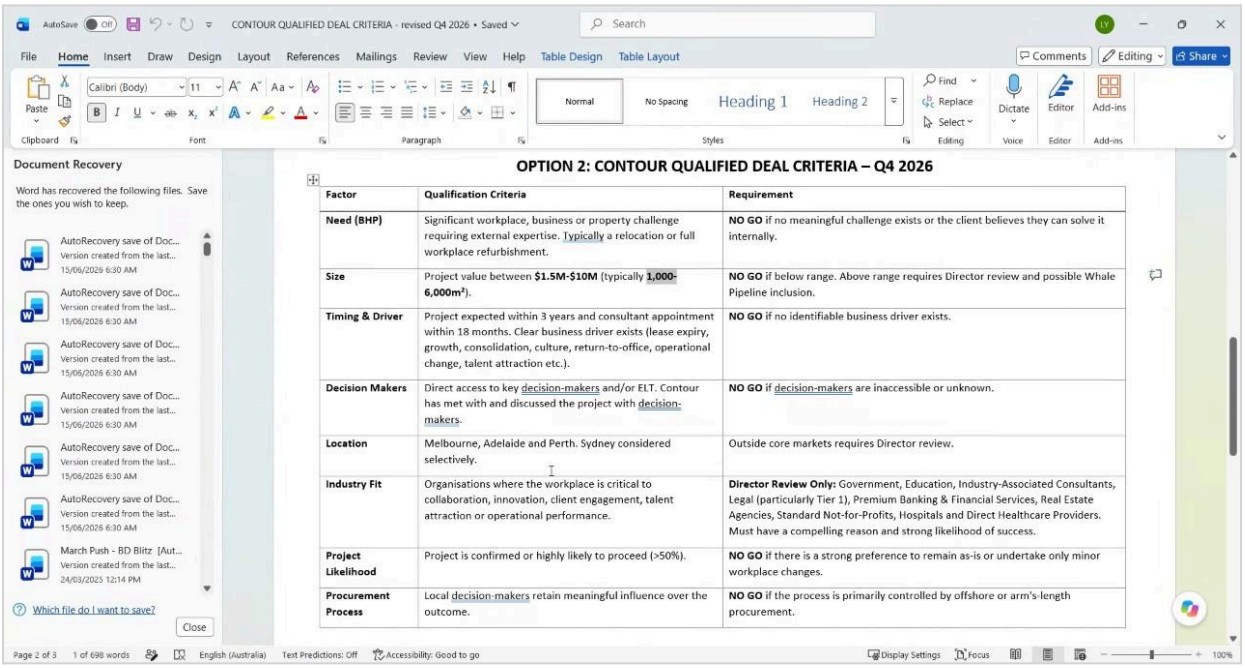

AI Search Optimization and Marketing Coordination: Al-khair Pama discussed utilizing cloud platforms and Claude with lead-only access to HubSpot for data tasks, alongside AI search optimization to help websites gain visibility across various AI models (00:00:00). Levi Young proposed scheduling a meeting with their marketing colleague either tomorrow or on Friday so that the colleague can discuss potential assistance on this front with Al-khair Pama (00:01:03).

AI Email Assistant Tool Development: Levi Young inquired about creating an AI agent or email assistant tool that scans incoming emails and pre-drafts succinct, basic response options for the user to select (00:01:03). Al-khair Pama noted experience with suggested replies in Google Workspace and confirmed they could build a similar tool for Levi, potentially as an add-in or via Microsoft Copilot functionality available in their Outlook subscription (00:02:22). Levi Young requested that the tool emulate a concise, direct tone of voice without complex jargon, which Al-khair Pama confirmed can be configured through predefined AI instructions (00:04:27).

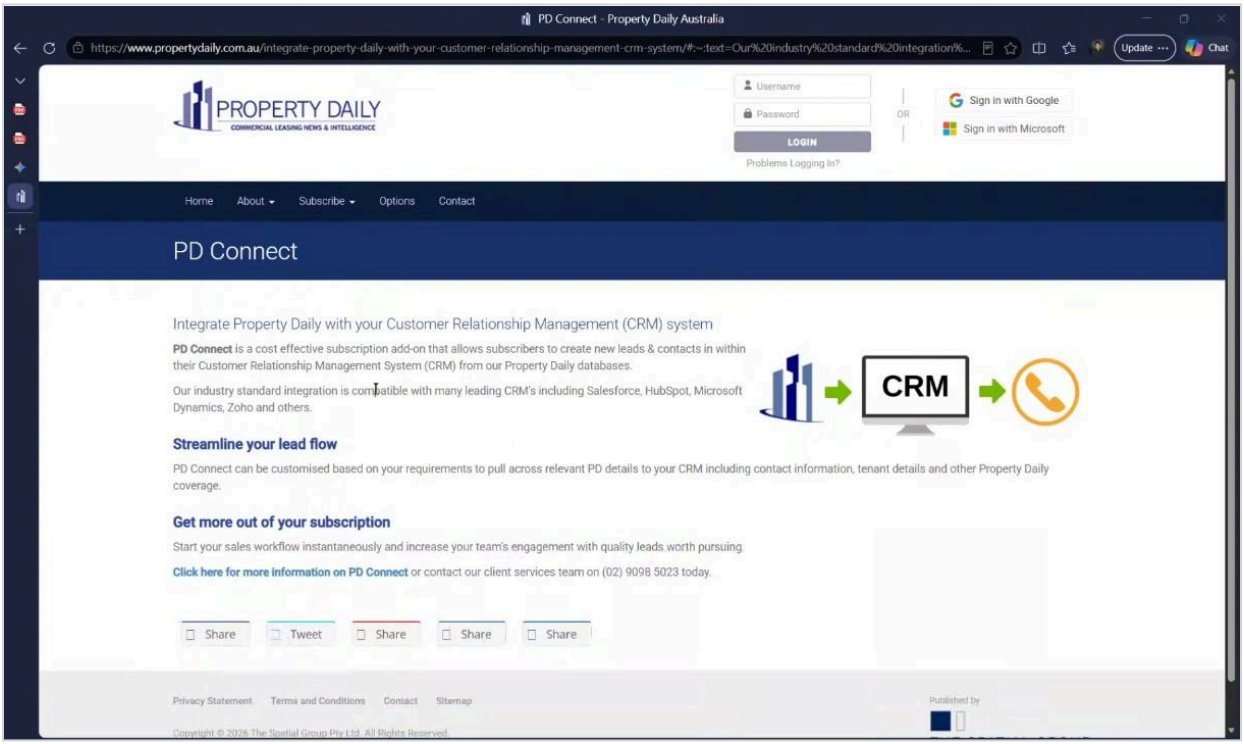

Research Tool and Credit-Based Model: Levi Young followed up on a research tool discussed previously, and Al-khair Pama explained that it would operate on a pay-as-you-use credit model rather than a fixed subscription. Al-khair Pama suggested using Claude 3.5 Sonnet for research tasks, or push capabilities depending on capacity needs (00:05:43).

Qualified Deal Criteria for Office Projects: Levi Young shared their screen to outline "option two qualified deal criteria" for office projects, which requires a size of 1,000 to 6,000 square meters, a financial range of $1.5 million to $10 million based on a minimum of $1,500 per square meter, and a headcount of typically 100 or more staff assuming an industry average of 10 square meters per person (00:10:21). Levi Young detailed additional criteria including a timing driver of projects occurring within 3 years, target locations primarily in Melbourne, Adelaide, or Perth (with selective consideration for Sydney), and the exclusion of specific industries such as government, education, premium banking, standard non-profits, hospitals, and direct healthcare providers (00:15:54). Al-khair Pama confirmed this information would be used to code and configure the AI research tool (00:18:42).

Lead Generation and Application Dashboard: Al-khair Pama proposed utilizing existing company lists already worked on within HubSpot as a baseline for generating leads, alongside capturing new companies experiencing trigger events (00:18:42). To deliver the output, Al-khair Pama suggested three options: sending data directly via HubSpot, exporting to Excel or Google Sheets, or building a custom centralized web application with dashboard insights, scoring, and analytics (00:22:06).

Property Daily Data Integration: Levi Young shared their screen to demonstrate "Property Daily," a daily-updated property database containing historical records of companies in the market (00:24:23). Al-khair Pama researched Property Daily during the meeting and identified an existing integration compatible with HubSpot, confirming it operates as a one-way transfer from Property Daily to HubSpot without exposing proprietary HubSpot data externally (00:28:03). Levi Young agreed to send the Property Daily login credentials to Al-khair Pama (00:34:21).

Account Review and Weekly Business Development Recommendations: Levi Young asked if the AI tool could review a business development representative's assigned account list (approximately 500 companies each) and provide weekly recommendations on who to contact based on past contact dates and trigger events (00:30:15). Al-khair Pama confirmed this capability would be possible through their proposed centralized application (00:31:22).

Working Hours and Communication Logistics: Levi Young noted that they are more responsive on WhatsApp than Teams when traveling due to integration issues (00:32:18). Regarding time zones, Al-khair Pama confirmed their preferred working hours are from 5:00 a.m. to 2:00 p.m. Australian time (00:33:23). Levi Young also mentioned that wider team meetings will be shared for Al-khair Pama to join starting next week (00:32:18).

Data Credentials, Scraping, and Automation Tools: Discussing LinkedIn and Sales Navigator, Al-khair Pama noted that retrieving leads from LinkedIn is difficult due to anti-scraping measures, though subscription-based plugins can be utilized (00:34:21).

Al-khair Pama also mentioned "init" as an automation tool to connect research and AI triggers, though they emphasized defining the database structure first to avoid overengineering (00:35:25).

Database Requirements and Advanced Lead Query Tools: Al-khair Pama noted that a proper database will be required for managing trigger events due to specific filtering criteria. Levi Young contrasted simple conversational queries (such as asking Copilot for fast-growing companies in Perth) with the desired deeper tool that integrates multiple factors like Zoom Info plugins for decision-maker contact details (00:36:24).

Technical Support and Meeting Scheduling: Al-khair Pama inquired about technical support for HubSpot, and Levi Young clarified that the team does not have a dedicated HubSpot specialist, relying instead on the admin team for account setups or independent online searches (00:38:24). To conclude, Levi Young and Al-khair Pama scheduled a follow-up meeting for tomorrow at 8:30 a.m. Australian time, with Al-khair Pama sending a calendar invite via Outlook containing a Google meeting link. Additionally, Levi Young noted that another team member named Ree will send Claude cloud account access either this afternoon or tonight (00:40:33).
