Quick Catchup Meeting

Nov 2, 2026

levi.young@contourinteriors.com.au Al-khair Pama

SignalHire delays and Lead Finder reviews and dashboard plans.

Lead Finder and Research Platform

- Al-khair resolved the SignalHire email spelling issue, and the DigitalOcean hosting environment is operational.
- Lead finder will queue leads with a manual review step before HubSpot ingestion, triggering an Outlook notification.
- The research platform will target high-growth sectors like energy transition, defense, and mining.
- The research engine will use competitor growth indicators to identify similar expanding companies.

Call Logging and Control Center

- Levi proposed a centralized control center for the BD team to dictate calls and log notes.
- The call logging tool will batch upload interactions directly into HubSpot.
- The tool will include preset search questions verifying contact status and recent conversation history.

KPI Dashboard and Central Platform Architecture

- The KPI dashboard development will proceed in parallel after completing the lead finder tool.
- Domain configuration and deployment settings will be established upon completing the website setup.
- Levi and Al-khair discussed eventually unifying all tools and dashboards into a single centralized platform.

Next steps

- ☐ [Al-khair Pama] Explore Call Integration: Assess API integration and cost trade-offs for the call logging feature.
- ☐ [Levi Young] Send Research Questions: Provide a documented list of criteria and

example questions to guide the research engine.

- [ ] [Levi Young] Share Customer List: Send the existing client database to facilitate connection analysis within the research tool.
- [ ] [Al-khair Pama] Update Lead Engine: Integrate the energy transition sector and growth-based search triggers into the research platform.
- [ ] [Al-khair Pama] Request Access: Ask for entry permissions to the project repository on GitHub.
- [ ] [Levi Young] Grant Repository Access: Provide the necessary repository entry rights for dashboard development.
- [ ] [Al-khair Pama] Build KPI Dashboard: Develop the new business metrics tracking tool in parallel with other project tasks.

Quick Catchup Meeting

Invited levi.young@contourinteriors.com.au Al-khair Pama

Attachments Quick Catchup Meeting

Meeting records Transcript

Summary

SignalHire delays and Lead Finder reviews and dashboard plans.

SignalHire and Lead Finder
SignalHire email error resolved. Lead Finder batch reviews approved.

Call Logging and Cockpit
Call logging and business development cockpit projects planned.

Dashboards and Infrastructure
Dashboard platforms evaluated and research engine focus expanded.

Decisions

Needs Further Discussion

- **Exploration of API tradeoffs for call logging feature** Al-khair will explore the tradeoffs of API integration for the voice-note call logging feature before a final decision is made.

Aligned

- **Manual review of lead lists before HubSpot integration** The team agreed that lead lists generated by the lead finder will be manually reviewed via notification link before being sent to HubSpot.
- **Prioritization of context search engine project** The second project to be built after the lead finder is the context search engine using the specified preset questions.
- **Parallel implementation of KPI dashboard and lead finder** Al-khair will implement the KPI dashboard and the lead finder in parallel after completing the lead finder.
- **Provision of domain subscription for website deployment** A domain subscription will be arranged and provided by Levi after Al-khair deploys the website so that domain configuration can be connected.
- **Integration of KPI dashboard into central platform** The KPI dashboard will ultimately be rebuilt inside the new central application platform.
- **Addition of growing industries to research engine search** Al-khair will add the energy transition and other specified growing industries to the research engine's search criteria.
- **Establishment of routine Monday catch-up schedule** The team established a routine catch-up schedule to meet every Monday, with ad-hoc meetings held as needed.

Next steps

- ☐ [Al-khair Pama] Explore Call Integration: Assess API integration and cost trade-offs for the call logging feature.
- ☐ [Levi Young] Send Research Questions: Provide a documented list of criteria and example questions to guide the research engine.
- ☐ [Levi Young] Share Customer List: Send the existing client database to facilitate connection analysis within the research tool.
- ☐ [Al-khair Pama] Update Lead Engine: Integrate the energy transition sector and growth-based search triggers into the research platform.

- [ ] [Al-khair Pama] Request Access: Ask for entry permissions to the project repository on GitHub.
- [ ] [Levi Young] Grant Repository Access: Provide the necessary repository entry rights for dashboard development.
- [ ] [Al-khair Pama] Build KPI Dashboard: Develop the new business metrics tracking tool in parallel with other project tasks.

Details

SignalHire Implementation Delay: Al-khair Pama reported a delay in completing the implementation process because SignalHire mistakenly misspelled their email address. Levi Young inquired if the issue was resolved, and Al-khair Pama confirmed that it was fixed (00:04:09).

Digital Ocean and Lead Finder Frequency: Al-khair Pama stated that the Digital Ocean setup was fixed on their end, noting that it occasionally requires a one-time verification. Al-khair Pama then discussed the Lead Finder tool, mentioning a scheduled frequency of two weeks after finding leads (00:05:11).

Lead Finder Review and HubSpot Integration: Al-khair Pama asked Levi Young if they wanted to review the lead list via email before it lands in HubSpot to support a centralized platform approach. Levi Young agreed that reviewing the first few batches would be beneficial, suggesting that a notification, such as an Outlook alert with a link, be sent when a new batch is ready for manual review before automated transfer (00:06:17).

Call Logging and Voice Note Transcription: Levi Young proposed a new project for call logging where business development staff can use a voice note or microphone button to dictate call details (such as updating an Adelaide lease expiry to the end of March 2028, three months out) to sync with HubSpot (00:07:24). Al-khair Pama noted that Claude can handle this via API integration, though session length could impact costs (00:08:50). Al-khair Pama agreed to explore the tradeoffs before making a

decision (00:09:54).

Business Development Cockpit and Pre-Call Research Engine: Levi Young outlined a control center or cockpit for the business development team that handles call logs, splits action items for HubSpot updates, drafts calendar invites, and creates task lists such as sending parcels or conducting research (00:09:54). Additionally, Levi Young detailed preset questions for a pre-call search bar to provide immediate context before ringing contacts: verifying if the contact is still at the company (e.g., checking Jason Ree at Vitera), extracting the last connected call conversation from HubSpot, checking recent news items or announcements, and identifying connections with existing customers (00:10:56). Al-khair Pama requested documentation, but Levi Young dictated the questions directly into the recording, and Al-khair Pama confirmed this will be the second project following Lead Finder (00:11:54).

KPI Dashboard Implementation and Platform Selection: Al-khair Pama discussed a meeting with Don regarding a KPI dashboard created using ChatGPT. Levi Young noted that a different platform is needed because ChatGPT is unsuitable. Levi Young mentioned an existing business development dashboard created on Vercel connected to Claude, while Al-khair Pama stated that KPI dashboards are straightforward to implement once requirements and target metrics are defined (00:14:45). Levi Young and Al-khair Pama discussed eventually integrating these dashboards and a meeting agenda system into a central operating platform, with Al-khair Pama planning to request GitHub access and work on the dashboard and Lead Finder in parallel (00:21:16).

Website Deployment and Hosting Infrastructure: Al-khair Pama raised the need for a domain after deploying the website and asked Levi Young to provide a domain or access for configuration. Al-khair Pama explained that Digital Ocean is preferred over Vercel because Digital Ocean provides an all-in-one toolbox with a built-in database, whereas Vercel is better suited for smaller front-end and back-end projects without native databases (00:16:52). Levi Young recalled that Vercel, GitHub, Supabase, and Resend subscriptions were previously used during the dashboard setup (00:18:19).

Research Engine Industry Focus and Competitor Tracking: Levi Young instructed Al-khair Pama to expand the research engine's industry focus to include growing sectors or those undergoing major changes, specifically identifying energy transition and energy infrastructure, defense, and certain types of mining (00:23:17). Levi Young further suggested that rapid growth in a primary company within an industry like energy transition should trigger searches for similar growth among its competitors, even without direct articles about those competitors. Al-khair Pama agreed to add the energy transition industry and continue incrementally improving the research engine (00:24:15).

Meeting Schedule and Ongoing Support: Levi Young noted they will be on leave the following day and returning on Wednesday, while Al-khair Pama confirmed that their routine catch-up occurs every Monday, with other communications handled as needed for emergencies. Al-khair Pama verified that their Digital Ocean and HubSpot setup is working well, and they will message Levi Young if any issues arise (00:25:51).

Quick Catchup Meeting - Transcript

00:04:09

Levi Young: Good morning. How you going?

Al-khair Pama: Hey, morning brother. How are you?

Levi Young: Yeah, good. Thanks. You had a good weekend?

Al-khair Pama: Yeah. Yeah, of course. I mean, I was supposed to, you know, get done with the the implementation thing, but as I talk as I uh keep in touch with uh I don't know who forgot the name of the he he misspelled my email. So, he thought he sent it, but he misspelled it. So, yeah.

Levi Young: Oh, the signal. The signal.

Al-khair Pama: Yeah,

Levi Young: Oh.

Al-khair Pama: the signal high I mean he he said that it was already created but I check on my junk box I mean jump email it doesn't appear. So as per audit she mistakenly spelled my my email. So yeah.

Levi Young: All right. Um,

Al-khair Pama: Yeah.

Levi Young: so have you let him know that or

Al-khair Pama: Oh yeah. Um, it's already it's already u something like

Levi Young: it's resolved?

Al-khair Pama: yeah

00:05:11

Levi Young: Okay, good. Um, good. Uh, no, I um just want to check in to see everything else is going. The digital ocean or whatever it's called, the ocean thing, was that fixed now or are you having any other everything going well?

Al-khair Pama: it's already fixed in my end but um usually digital ocean always ask for one time you know one time Right. Yeah. So that's that's f something in the end. But yeah, um this is just a minor thing to consider.

Levi Young: Yeah.

Al-khair Pama: But uh yeah, I would like to to ask a few question regarding this one because of course for us to like move on

Levi Young: Yep.

Al-khair Pama: because the the lead finder is already great. Um just needs a few few details.

Levi Young: Yep.

Al-khair Pama: So,

Levi Young: Yep.

Al-khair Pama: so yeah um it is scheduled right two weeks let's say two weeks um uh infre frequency like that so after finding some leads yeah yeah so okay so

Levi Young: The internet's dropping out.

Al-khair Pama: am I audible right now yep so after finding

00:06:17

Levi Young: Yeah, I can hear you. Yep. Yep.

Al-khair Pama: some leads do you want Hey, uh before it lands HubSpot, do you want a review of that list that was sent to you through email or not?

Levi Young: Um, I think for the first few, yes, I think that would be good. Um,

Al-khair Pama: because yeah well I'm I'm I'm trying to to

Levi Young: just just or what do you reckon?

Al-khair Pama: to suggest that since we are we have a like we are fully in direction of making this platform as a centralized platform why not why not

Levi Young: Yep.

Al-khair Pama: um the sending to I mean the the sending to to to HubSpot is like it's not fully automated or it's not fully

Levi Young: Okay.

Al-khair Pama: automated but before before it lands to like Hopspot like you have to check it manually to to like if if if this leads is great in in our central app web app or does that is that what you think?

Levi Young: Yeah. Yeah. Yeah, that's good. Yep. Yep.

00:07:24

Al-khair Pama: Yeah. So

Levi Young: Anyone can send a notification when there's a new batch there or something.

Al-khair Pama: yeah,

Levi Young: Say, review the list.

Al-khair Pama: yeah, notification that that would be great like I'll let's say in your outlook like hey the the leads is already here please click please uh click this link something like that to review it.

Levi Young: Yeah.

Al-khair Pama: Yeah. So um uh how do you spell? So uh after this what is the like your your next project? I think it was calendar

Levi Young: Um yeah. So, one thing I would like is the um we talked about um when they log calls like something where they can um dictate everything that's happened on the call or take the notes and it syncs it to HubSpot.

Al-khair Pama: Oh yeah.

Levi Young: So, for example, um like get off a call and we hit the voice note or the the mic button and say um spoke with Jason Ree from Bera um said that the office is going well. You know, the the call and then you might give some prompts um you complete the following update the Adelaide lease expiry to March end of March 2028. three months time.

00:08:50

Levi Young: You know the prompts for HubSpot.

Al-khair Pama: Oh, so so like where where that where that it's get started like in the in the HubSpot like you you you you select it's like someone to talk to like

Levi Young: Um could Yeah. Well, could it could it be integrated to that like where it's running in parallel to the HubSpot screen and they select the contact and then it just logs the call or or can you have it as like a a platform i.e. just a a I don't know like a notepad page basically equivalent and you just hit transcribe and say right log to call and you could just go through after every call and and dictate what happened and then at the end of the block it goes through and batch uploads them into HubSpot because Claude can do that at the moment like we've done that trial that a few times with Yep.

Al-khair Pama: Yeah, it can it can it can do but um yeah it can do it can do.

Levi Young: So it's just

Al-khair Pama: So um do you use like something like um I mean of course you use plug on a plan right?

00:09:54

Levi Young: Yeah, correct.

Al-khair Pama: Okay.

Levi Young: Yeah.

Al-khair Pama: So, so that would be on our case that will be API integration. So, um the downside of it if the the the log calls is is like long session that would like somehow cost costly if if if it takes so long. But um let's let's let me you know um

Levi Young: Do you want to do some exploring on that maybe?

Al-khair Pama: I yeah maybe I'll um I'll explore the tradeoffs and

Levi Young: Yeah.

Al-khair Pama: things before I can decide something.

Levi Young: The other thing is Yep.

Al-khair Pama: But but but it is physical brother. Yeah.

Levi Young: The other thing is I would like it so it's almost like a a um like a a cockpit or a control center that the BD team have sitting open and there's that part of it that's sort of their main call log thing or you know every call they do the action item go into that and and it sorts them you know it might say um because ideally what would happen is in a call block where they're doing a series of calls they just say everything into this thing and it splits out what to do next.

00:10:56

Levi Young: So it will it will do the updates on HubSpot. It will um potentially set up the meetings or at least the draft calendar invites for them to send off and it can also create a task list for them with tasks on HubSpot of P actions they have to do. Like it might be um you know send a parcel to this person or research this or or whatever. But then before the calls on a little um search engine where they can put in the name and company of the person they're about to ring and we just have some preset questions that it does a quick search on um to make sure that they know everything. You know, it could be like what was the last call logged with this person? Um quick search is the person still there?

Al-khair Pama: Yep.

Levi Young: Um does this person have any connections with any of our customers or the rest? So, I could give you those questions as well, but it's just like they put the name in and then bang, there's a little paragraph there so that when they ring,

00:11:54

Al-khair Pama: Yeah. Yeah.

Levi Young: they've got the context.

Al-khair Pama: Yeah. Yeah. So, um yeah, understand. So, do you have like um like some some references or like examples that I can look into?

Levi Young: of the questions.

Al-khair Pama: Yep.

Levi Young: Yep, I can send them. Yep. Um, I just can't think of them.

Al-khair Pama: Yeah.

Levi Young: I mean, I probably could say them now. Is this recorded? Because I could just say and then you could get the transcript if you like.

Al-khair Pama: Uh maybe you just um send I mean do you have like the documentation

Levi Young: Send a list. Yeah.

Al-khair Pama: docs?

Levi Young: No, no, because we've never done it before.

Al-khair Pama: I don't know no

Levi Young: Yeah. It's only, it would only be like what would have happened to date is someone's going to ring, you know, Jason Reeds from Vitera and so they would put type in Jason Reeds Vera LinkedIn into Google and they'd say, "Okay, yep, he's still there, so that's all good." Click on the call notes on HubSpot and see what the last conversation was.

00:12:45

Levi Young: You know, it's all stuff that probably takes 5 minutes or so. Whereas if they just put it straight into this little search bar or little project thing, all those questions that we would usually search in Google or on HubSpot are preformatted

Al-khair Pama: preset. Yeah. For format.

Levi Young: preset and it just Yep. Yep.

Al-khair Pama: Yeah. Yeah. So, so um Yeah. Yeah. You can say it right now. I example because it's it's already taking notes.

Levi Young: Yep. Yep. That's perfect. Oh, say it now.

Al-khair Pama: Yeah.

Levi Young: Yep.

Al-khair Pama: Yeah.

Levi Young: So the questions example questions would be we can add to these but they would be as follows. Um is the contact still at the company? For example, if on HubSpot we're calling them from ABC company, we want to do a quick search to make sure they still are in that current role at ABC company. Um we want to see what was the last connected call or conversation with this person.

00:13:42

Levi Young: So extract that from previous call notes on HubSpot. We want to see any um you know in the news items that the person might might be relevant to the person or the company i.e. very recent announcements that we should be aware of before ringing them. Um, we also want to see are there any connections with this company that we're ringing um with um some other customers that

Al-khair Pama: Yep.

Levi Young: we're working with currently and I can also if I share with you existing customer list then that way you can sort of add that in that are there any connections with any one of these listed companies.

Al-khair Pama: Yeah. Understand that. So this will be this this thing will be like our second uh after it is

Levi Young: Yep. Second project. Yep.

Al-khair Pama: fight.

Levi Young: Yep.

Al-khair Pama: Yeah. Yes.

Levi Young: Yep.

Al-khair Pama: So yeah.

Levi Young: And then after that calendar I think will be the next one.

Al-khair Pama: So um well um I had a meeting with like with Don Yeah.

00:14:45

Levi Young: Oh yes.

Al-khair Pama: with regarding the K regarding with the KPI dashboard.

Levi Young: Yep.

Al-khair Pama: Do you want to be like to to to to I mean is that um do do you talk about that prior?

Levi Young: Yes. Yeah, I did um me speak to her on Friday about that. I'm not sure which one she showed you. Did she show you the one that she created on Chat JP?

Al-khair Pama: Yeah.

Levi Young: Yeah. Yeah. So, we probably need to create a different one because it's on the wrong platform.

Al-khair Pama: Yeah. Yeah. Chat GBT you know chat GBT might stole that thing.

Levi Young: Yeah.

Al-khair Pama: So yeah, I think dashboard will be will be some uh I would say easy to to to implement

Levi Young: Yeah.

Al-khair Pama: but yeah so yeah I think we can I can do I

Levi Young: Um, yeah. No, I was going to say Yeah.

Al-khair Pama: can do parallel.

Levi Young: Yeah, that's fine. Yeah.

Al-khair Pama: What was that?

Levi Young: No, I was going to say we've got a dashboard um another dashboard which is more for business development that was created on um is it Versel?

00:15:51

Levi Young: Are you familiar with that?

Al-khair Pama: Yeah, Bracel.

Levi Young: Yep. Um, that was done a little while ago, but that's just for business development, but I'm pretty sure that was Claude connected. So, that might be a better one for you to work with. Um, but it's probably not a priority just yet.

Al-khair Pama: Yeah. Yeah. Yeah. But but yeah. Um let me see. Let me see. Well, KPI dashboard is usually just not not so hard to to to implement because what the problem that you that you I mean the only requirement that you need is what sort of numbers do you do you want to see right

Levi Young: Yeah. Yep.

Al-khair Pama: that yeah so yeah I I I'll after this finder I might do those two things in parallel yeah so so we can

Levi Young: Yep.

Al-khair Pama: get done and uh yeah um do you regarding with the website like once I

Levi Young: Yep.

Al-khair Pama: deployed it of course there's a need for like u a domain

00:16:52

Levi Young: Paying a subscription. Yeah. Domain. Yep.

Al-khair Pama: yeah domain so would it be possible to to like um after I deploy it um

you can send me like the domain or um give me an access to a domain for me to to connect the the the configuration from the domain in the deployment

Levi Young: So would a domain be like um Versel or not?

Al-khair Pama: I don't Versel is kind of well no we we cannot use Versel because of course we use um I mean Versell and and uh Digital Ocean is somehow familiar because they they both host front end back end a website basically but I would say Verscell is like more on

Levi Young: Yep.

Al-khair Pama: a small small projects and and you know

Levi Young: Yeah. Okay.

Al-khair Pama: and uh in terms of like processing data it's not efficient because mostly it doesn't really it doesn't have like a a database out of the box unlike unlike digital ocean you have a database so it's an

Levi Young: Yeah. Okay.

Al-khair Pama: allin-one toolbox so what I need is yeah I will this is just now this is just maybe maybe this week I just going to inform you that um after this uh deployment we might as well can get some like something domain yeah Yeah.

00:18:19

Levi Young: Yep. Yep. Yep. Okay, that makes sense. Yep.

Al-khair Pama: Yeah.

Levi Young: Um like I'm trying to think of some of the other ones we used as part of that dashboard setup. It was um here we go.

Al-khair Pama: And

Levi Young: Versel um sign up. And then there's another one I signed up to. Um yep.

Al-khair Pama: can you show me the developers one?

Levi Young: Um. Um. Where is it?

Al-khair Pama: What's great about Versel because I mean digital ocean Versel provide some like domain but their domain is like customized on on their platform like for

example contour that digital ocean something like that or but it's it's yeah so might as well

Levi Young: Oh yeah.

Al-khair Pama: just I mean just a few bucks

Levi Young: Um we had um GitHub, Superbase, and Reend subscription set up as part of that dashboard if any of those are familiar.

Al-khair Pama: Yeah. Yeah, I'm familiar with that. Superb base GitHub. Yeah.

Levi Young: So that's all makes sense.

00:19:44

Levi Young: That all sound that's sort of would be normal.

Al-khair Pama: Yeah.

Levi Young: Yep. So, this dashboard um so I've got a um two o'clock just I'll just a couple of minutes. Um so, I'm not sure if you can see this dashboard here.

Al-khair Pama: Let me see. Oh,

Levi Young: This one on the screen and

Al-khair Pama: okay.

Levi Young: um this as a user and it's customized like that. So this a little while back

Al-khair Pama: Yeah. Can you like scroll down?

Levi Young: so yeah so it's semi-customized quite customized rather um I suppose from a yeah I'll probably keep this one as it is for now. Um I don't know whether it's adding the finance dashboard into this with separate um separate uh what's the

Al-khair Pama: Yeah.

Levi Young: word like different access it because we don't want everyone to be seeing the finance one like the people that

Al-khair Pama: Analytics. Yeah.

Levi Young: see this dashboard we don't want to be seeing the finance one but maybe there's limits you can

Al-khair Pama: Yeah.

00:21:16

Al-khair Pama: Yeah. Separation of concern.

Levi Young: have Yeah.

Al-khair Pama: Yeah. So I think um well we have different dashboard that we have different KPIs right.

Levi Young: Yep.

Al-khair Pama: Yeah.

Levi Young: However,

Al-khair Pama: So probably Yeah.

Levi Young: if we made central platform like we're talking about a big central app or whatever and it made sense to rebuild this dashboard in that platform like in the new thing that we're making that's fine as well if if that's what it needs to be. Um,

Al-khair Pama: Yeah.

Levi Young: I mean ultimately, maybe not straight away, but like ultimately if there's a big central platform that's got the different dashboards, we're even saying even like something that we can run our meeting agendas on and all the rest like a central, you know, operating system.

Al-khair Pama: Yeah. Yeah. That would that would be great because um that's visible totally because um we can just of course um you want to put it that you you want to put that uh thing that dashboard in in the central application right and also the one that um Don showed me.

00:22:21

Levi Young: Yep.

Al-khair Pama: Yeah. So that would be like visible and uh well maybe uh like ne this week or well this week I I'll I'll I'll ask a few more question regarding that.

Levi Young: Yep.

Al-khair Pama: You can just send me the the link and u later I'll I'll ask for like GitHub uh access if if you can add me or Yeah.

Levi Young: Yep, I can do that.

Al-khair Pama: And yeah, so you know that is just one of the priorities. But yeah, I think um Leadfinder uh probably tomorrow or like later I can I can finish

Levi Young: Yep.

Al-khair Pama: it.

Levi Young: Now,

Al-khair Pama: But

Levi Young: do we need to add in our subscription now or how does it work so that the usage is getting build to the contour cla account?

Al-khair Pama: what do you mean?

Levi Young: Is that you know how it charges per Is that all up and running now on our system now that we've got the API key? Is that all how it works?

Al-khair Pama: Yeah. Yeah.

Levi Young: It's on Yeah.

00:23:17

Al-khair Pama: that that all I need with the thing with claude is that you don't need to fully surrender your system like it works one way like you just

Levi Young: Yep.

Al-khair Pama: use cloud but they don't like they don't have like the the autonomy to your system like just use them as basically cloud is just yeah basically cloud is just a small part of

Levi Young: as needed.

Al-khair Pama: I mean it's just a part of a system it's not our system

Levi Young: Yeah. Yeah. Yeah. Um, one thing I was going to say with um, that research tool is, and I think we may have covered it, but just keeping an eye on industries that are growing or going through major change. I'm assuming that will pick that up as well. like ones we're doing a lot in where there's sort often announcements is like energy transition. So the the energy infrastructure side of things um defense there seems to be a lot

Al-khair Pama: Oh yeah.

Levi Young: happening. Um so mining some types of mining. So just somehow we can just add that to its search that it's focusing on

00:24:15

Al-khair Pama: Yeah.

Levi Young: those or looking at those but also keep an eye out for industries where something happens and they the industry goes through a lot of growth and therefore companies in that industry become hot targets.

Al-khair Pama: Yeah. Yeah. I agree with that. So um currently of course the one you said um I can add that I can add that energy something transition um industry.

Levi Young: transition here.

Al-khair Pama: Yeah I can add that. So um yeah I think the signal hire is there the hubspot is there. So yeah, I'll get this thing done. And uh do you have any um question or like

Levi Young: Yep. Yeah.

Al-khair Pama: um

Levi Young: One other thing was just with the growth um growing industries I'm thinking um if it comes across a company that's going through rapid growth and it seems to be because of the fact that it's due to the industry it's in whether that can be a trigger to say well okay what are what competitors does that company have that it's also going through similar growth like for example say in the energy transition there's like primary energy producers or whatever a particular company that's one of those is going through rapid growth And you there's an article that says um its role in the

energy sector means it's the industry going you know it's growing growing and if we look at competitors of that company even though there might not be necessarily an article about the same comp the other companies the fact that one is going well is an indication that others like them would be going well.

00:25:51

Levi Young: So,

Al-khair Pama: Okay.

Levi Young: it's probably just a bit of a context thing.

Al-khair Pama: Yeah, that's good thing because um you know um we are going to incrementally um improve our research engine. Yeah.

Levi Young: Yep. Yep.

Al-khair Pama: Yep.

Levi Young: Sounds good.

Al-khair Pama: So yeah.

Levi Young: Um, I'm on leave tomorrow,

Al-khair Pama: So h

Levi Young: but um, you can still send me a message and I'll respond when I can, but I'll be back Wednesday. So, yeah, just let me know if anything between now and then.

Al-khair Pama: Yeah. Yeah. Yeah. So yeah. So our routinely like a must catch up is every every like Monday.

Levi Young: Monday. Yep.

Al-khair Pama: Yeah. So any other than that is like an emergency or like a quick catch up as needed.

Levi Young: As needed. Yep. Yep. Exactly.

Al-khair Pama: Yeah.

Levi Young: Yep. Good. How's everything else going?

Al-khair Pama: So

Levi Young: Your setup all work well. You you got the head around all the hubspot and systems now. All seems to work well.

Al-khair Pama: yeah, it seems to work working well with digital ocean. I just need to like um if if there's any, you know, thing that I encounter, I will just message.

Levi Young: Yep. Perfect.

Al-khair Pama: Yeah.

Levi Young: Thank you very much.

Al-khair Pama: Yep, brother. Thank you.

Levi Young: Have a good afternoon.

Al-khair Pama: Thank you. Thank you.

Levi Young: We'll talk soon. Yeah.

Al-khair Pama: Yeah.

Levi Young: Cheers.

Al-khair Pama: Yeah.

Levi Young: Thanks.

Al-khair Pama: Peace.

Levi Young: I'll stay safe.

Al-khair Pama: Peace.
