levi.young@contourinteriors.com.au Al-khair Pama

API setup review and CRM integration vision with prototype demonstration

API and Platform Prototype

- The current API functions properly with an expiration date set for November.
- Al-khair demonstrated a mobile-friendly prototype designed for convenient lead generation.

Lead Finder and Research Engine

- Full research searches across 4 main Australian regions cost approximately $8 per execution.
- Automated scraping of afr.com requires valid login credentials to extract business news.
- The research engine captures domestic headlines and international company expansions into Australia.
- The lead finder scheduler is designed to operate on a 2-week frequency.

Centralized CRM and Pipeline Management

- Levi outlined a comprehensive platform vision to dictate call notes and update HubSpot.
- The platform will integrate with Outlook calendars to streamline meeting scheduling.
- The tool will scan deal pipelines to generate daily task lists and flag inactive accounts.

Next steps

- [ ] [Levi Young] Grant Admin Access: Provide administrative access to HubSpot and Outlook to facilitate system integration.
- [ ] [Levi Young] Update Account Access: Follow up with Marcus to add Al-khair to the SignalHire account.
- [ ] [Al-khair Pama] Configure HubSpot Workflows: Push lead finder data to HubSpot and implement automated workflows for lead management.
- [ ] [Levi Young] Provide Login Credentials: Send the login credentials for the Australian Financial Review website to enable automated scraping.

- [ ] [Al-khair Pama] Set Search Frequency: Configure the lead finder scheduler to run every 2 weeks.

Summary

API setup review and CRM integration vision with prototype demonstration

API Setup and Vision
API setup functions correctly with expiration planned for renewal. Platform vision includes mobile call dictation and CRM integration.

Prototype and Priorities
Prototype demonstration established research engine as top development priority. Integration requires specific administrative access levels.

Search Scope and News
Research searches incur measurable costs per run. Industry news source integration includes mining and defense publications.

Decisions

Aligned

- **HubSpot integration for call notes dictation** The participants agreed to integrate a dictation platform that uploads call notes directly into HubSpot and Outlook once the research engine is finished.

- **Administrative access levels for HubSpot integration** The participants agreed to provide administrative access levels for HubSpot to enable centralized application integration.
- **Two-week schedule frequency for lead finder** The participants agreed to set the initial lead finder automated schedule frequency to every two weeks.
- **Full geographic research scope for Australia** The participants agreed to run initial full research coverage across all four main Australian regions to evaluate lead finder output.

Next steps

- ☐ [Levi Young] Grant Admin Access: Provide administrative access to HubSpot and Outlook to facilitate system integration.
- ☐ [Levi Young] Update Account Access: Follow up with Marcus to add Al-khair to the SignalHire account.
- ☐ [Al-khair Pama] Configure HubSpot Workflows: Push lead finder data to HubSpot and implement automated workflows for lead management.
- ☐ [Levi Young] Provide Login Credentials: Send the login credentials for the Australian Financial Review website to enable automated scraping.
- ☐ [Al-khair Pama] Set Search Frequency: Configure the lead finder scheduler to run every 2 weeks.

Details

API Setup and Expiration: Al-khair Pama reported that the API setup was functioning correctly, though they noted it has an expiration limit set for November. Levi Young and Al-khair Pama agreed that the API can be regenerated and extended when necessary (00:00:04).

Call Dictation and CRM Integration Vision: Levi Young proposed developing a platform where business development team members can dictate call notes via a mobile app that automatically uploads them to HubSpot and connects with Outlook (00:06:25). Al-khair Pama agreed with the plan and noted that user access hierarchies can be implemented, allowing principals different access levels compared to other staff (00:07:46). Furthermore, Levi Young envisioned a comprehensive tool incorporating company announcements and onboarding modules for new starters (00:08:36).

Prototype Demonstration and Development Priorities: Al-khair Pama demonstrated a mobile-friendly prototype of the platform, showing its capability to run searches and filter by locations like Sydney and Melbourne. Al-khair Pama and Levi Young discussed development priorities, establishing that the research engine takes top priority, followed by calendar scheduling and call uploading efficiencies (00:09:47) (00:14:44).

Call Management, Pipeline Scanning, and Historical Context Features: Levi Young detailed a feature allowing users to dictate meeting notes—such as updates on clients like James from ABC Power—to automate updates, calendar invites, and task creation without manual typing (00:10:52). Levi Young also suggested including preset cold-call questions, displaying previous contact history, and scanning the deal pipeline to generate daily task lists for dormant deals (00:11:58) (00:24:48).

Administrative Access Requirements for CRM and Calendar Integration: Al-khair Pama stated that integrating Outlook and HubSpot across decentralized platforms requires administrative access levels and specific account permissions. Levi Young confirmed that Al-khair Pama will be provided with the necessary administrator access to manage the integrations (00:13:52).

Lead Finder Geographic Scope and Scheduling Frequency: Al-khair Pama highlighted that running research searches across the four main regions of Australia incurs a cost of approximately eight dollars per search. Levi Young requested running full research searches a couple of times initially to verify accuracy against market

conditions (00:21:27). Regarding scheduling frequency, Al-khair Pama and Levi Young agreed to start with a two-week automated scan cycle for leads feeding into HubSpot, adjusting to monthly if lead volume is insufficient (00:15:30) (00:20:24). Additionally, Levi Young clarified that overseas company news will only be tracked if it is directly relevant to Australian cities, such as establishing a local headquarters (00:22:28).

Industry News Source Integration and Australian Financial Review Access: Levi Young identified several industry news sources to integrate, including mining.com, defense news, business news headlines, and the Australian Financial Review (afr.com), which requires a login (00:16:25). Al-khair Pama discussed the technical implementation of scraping with bot logic while being mindful of legal restrictions, while Levi Young suggested downloading the daily Australian Financial Review paper for scanning if website access presents hurdles (00:17:25).

SignalHire Account Setup Follow-up: Al-khair Pama requested an update on SignalHire account creation, stating their email had not yet received access. Levi Young committed to following up with Marcus in the office to ensure Al-khair Pama is added to the account before the end of the workday (00:25:51).

Meeting for other projects - Transcript

00:00:04

Al-khair Pama: Something. Hey, I don't know. Don't see any shakes through my blender. A few moments later. Okay. 369 to Thank you. Christmas. Oh, freaking Hey Hey, hey, hey, brother. What's up?

Levi Young: Hey, how you going?

Al-khair Pama: Yeah. So, yeah. How was how was your day?

Levi Young: Hang on. Sorry. I just Yeah, it's been good. Um a little bit patchy turn off. Yeah, it's been good. How about yours?

Al-khair Pama: Great. Great. Just doing some, you know, setting up those things that you've sent to me,

Levi Young: Yes.

Al-khair Pama: the API and also,

Levi Young: Did that work? API? Did that all work? All right.

Al-khair Pama: yeah, it works all right. But yeah, it has a limit like it it it will expire in like November, but you know, we can just generate again.

Levi Young: Yeah, we got it again.

00:06:25

Levi Young: Yeah. Extend it. Yeah.

Al-khair Pama: Yeah.

Levi Young: Yep. Um, okay, great. No, I um we've been doing a bit of research as well at the back end. Well, not research, planning.

Al-khair Pama: Nope.

Levi Young: Um, I would like to um talk to you about it. So a thinking that we have, a thought that we have is um to tie in either this platform or or a similar platform that um everyone starting off in business development anyway use to essentially dictate their call notes and um it uploads directly into HubSpot. So I've we've we've been a few of us here have been just syncing cord to HubSpot um which is which is um basically when it connects you can say you know log a call with James and create a follow-up task to call in three days or whatever and it does all that. So that's that can already happen like we've done that with Claude but I'd like to see if we can get it into some platform.

Al-khair Pama: system.

00:07:46

Levi Young: Yeah.

Al-khair Pama: Yeah.

Levi Young: Whereby Yeah. Exactly.

Al-khair Pama: Yeah.

Levi Young: Where like an app on the phone and the BD guys at the end of the call just hit it dictate into it and it all connects in connects into Outlook.

Al-khair Pama: Yep.

Levi Young: Outlook even. Um so yeah I think once we build finalize this platform that you've got we can then start adding some of this stuff to it.

Al-khair Pama: Yep.

Levi Young: Is that how you think it would work?

Al-khair Pama: That Yeah. Yeah. Yeah. Yeah. Yeah. That will work. You know, that's that's great plan, brother. Like I mean, we we're really aligned with with this one. Like when this thing that like like this this first project get done gets done like the research part we can just plug in the things that we need and

Levi Young: Y

Al-khair Pama: also filter out the the like put some you know hierarchy on it like for example you as a principal you know business something you can only access what what's on your yeah different things.

00:08:36

Levi Young: exactly different things. Yep.

Al-khair Pama: Yeah. So yeah,

Levi Young: Yep.

Al-khair Pama: definitely we can because of course if you're just going to prompted cloud that's not very efficient you know

Levi Young: No.

Al-khair Pama: that's that's a recipe recipe for disaster.

Levi Young: Yeah. Yeah.

Al-khair Pama: Yeah.

Levi Young: So,

Al-khair Pama: So we it's visible.

Levi Young: yeah, that's good.

Al-khair Pama: It's visible.

Levi Young: Yep.

Al-khair Pama: Yeah.

Levi Young: So our thought is or my thought is anyway um and this is where I'd be very keen for your input on how to put it all together but the ultimate will be a quite a comprehensive um tool or platform that brings a lot of things together tying into our dashboards. Um it will tie into you know my thought is even at such that every team member has this app um for a variety of different purposes like we could do company announcements through it if there's something that comes up um new starters an onboarding module that they sign in and it sort of gives them an overview of the company and um I mean that's just some of them but I'm thinking it would become a

very uh unique platform that brings brings a lot of things together into one.

00:09:47

Al-khair Pama: Yep. It's very feasible by the way because this very first, you know, anyways the prototype that I made is actually um mobile friendly like it's it can fits in the screen.

Levi Young: Yep.

Al-khair Pama: I think I can show you. Can I show you?

Levi Young: Yep.

Al-khair Pama: I don't It's not running.

Levi Young: Yeah. Go for it. Yeah. Yeah. Yep. Yep. Sorry,

Al-khair Pama: Wait a minute.

Levi Young: I've just got my camera off because the internet's pretty um patchy here at the moment.

Al-khair Pama: Um

Levi Young: But let me know if it cuts out.

Al-khair Pama: yeah. So um wait a minute. Uh just I'll just run the the program. So yeah. Anyways, um as I running the program, uh meanwhile meanwhile as a running program, um which do you think should we prioritize? I mean, of course, we we should prioritize the the research engine. And then the second one is I think you've said the calendar the the scheduling part is that

00:10:52

Levi Young: Yeah, uploading the calls to um yeah well actually maybe that or otherwise um I'm thinking for to help with efficiencies.

Al-khair Pama: dashboard

Levi Young: Um, basically where it's a it's a you know, not too dissimilar to what you have with Claude at the moment in the search bar, but basically um they can dictate or upload notes from every call or meeting and tell it what to do in terms of um just spoken with James from ABC Power and he said this and this and this. update the Melbourne lease expiry to this create a task you know basically where they can dictate the call to avoid all the typing and clicking that happens now and it just it's centralized through it I mean it can happen now through chord when we've synced it but I think it would be great if it was our own thing just to have a bit more of a brain on it i.e knows what we're

Al-khair Pama: Yeah.

Levi Young: saying, has a bit more context behind it.

Al-khair Pama: Yeah. Yeah. That that would be that would be so great.

00:11:58

Al-khair Pama: So like we have our own like platform that has an agent that will you know basically automates

Levi Young: Yep.

Al-khair Pama: everything.

Levi Young: Yep.

Al-khair Pama: Yeah.

Levi Young: Exactly.

Al-khair Pama: So yeah.

Levi Young: And that would connect with um calendar ideally or Outlook. So we say, "Okay, set up a meeting calendar invite for this and this date, this time zone." Um so yeah, that's that's I think where I'd like to get to pretty soon. and and when they're about to do a call,

Al-khair Pama: Yeah.

Levi Young: this research tool will be fantastic for it. We have some preset questions that we can say about to call, you know, James from ABC Power and we know the

typical questions before we ring them and we say, let's say it's a cold call.

Al-khair Pama: Yep. Yep.

Levi Young: Um the and we just have a preset set of questions that we want it to filter is is like is the person still there? um what things should we be mindful of to do with him? What things should be mindful of to do with the company?

00:12:55

Levi Young: Like recent announcements or whatever. And um I don't know, we could come up with that,

Al-khair Pama: Yeah. Yeah.

Levi Young: but a bit of context.

Al-khair Pama: I mean, yeah. Yeah. So, as long as, you know, as long as we have those, you know, set priorities, you know,

Levi Young: Yep.

Al-khair Pama: we can we can just Yeah. So, I think that Yeah.

Levi Young: Because I was going to say um it could then also pull up what the previous

Al-khair Pama: Go ahead. Go.

Levi Young: contact was with that person. Like rather than them scrolling through what the last thing they said, it just says this is the last connected call. Um last time you spoke to him was this time and yeah. So

Al-khair Pama: So, yeah. Um, well, since you said that you wanted to also connect the Outlook, right?

Levi Young: Yep.

Al-khair Pama: So, yeah, that would be great. But yeah, I think there's there's some needs of a lot of accounts since of course uh you guys are most of your um platform are decentralized, right?

00:13:52

Levi Young: Yep.

Al-khair Pama: Yeah.

Levi Young: Yep.

Al-khair Pama: So um now maybe next week I can I can ask for some account

Levi Young: Yep.

Al-khair Pama: again for example for for an outlook admin thing I can connect

Levi Young: Yeah. Yes. Admin.

Al-khair Pama: those.

Levi Young: Yeah.

Al-khair Pama: Yeah.

Levi Young: Yeah. You can then manage it all as an admin.

Al-khair Pama: So manage.

Levi Young: Yep.

Al-khair Pama: Yeah. So that would need a lot of account and also I think in HubSpot there is some things that I still can't access with.

Levi Young: Oh, okay.

Al-khair Pama: So that might be uh yeah so that's yeah so if you wanted to to to

Levi Young: Yep.

Al-khair Pama: really really uh put our effort in this direction of centralizing all

Levi Young: Yep.

Al-khair Pama: the application that would be like giving me the certain access

Levi Young: Admin. Yep.

Al-khair Pama: level because it would it wouldn't be possible if it's like yeah

Levi Young: Yeah.

Al-khair Pama: so uh yeah I can show you the the screen is it yeah so here

00:14:44

Levi Young: Yep. Oh, yeah. Perfect.

Al-khair Pama: so yeah so as You can see it's already mobile friendly. Like you can just,

Levi Young: Okay. Nice.

Al-khair Pama: you know,

Levi Young: Yep.

Al-khair Pama: you can just like in a Starbucks having some coffee and finding some leads on your phone.

Levi Young: Yep. Yeah.

Al-khair Pama: Yeah, you know,

Levi Young: That's good.

Al-khair Pama: having a having a good time with your friend. Oh, but I want some leads. Then you can just run it and then you can you can see the cost, right? Like this one.

Levi Young: Yep.

Al-khair Pama: Yeah. And then you can just pin pin down any Sydney like Melbourne like that.

Levi Young: Perfect.

Al-khair Pama: See you.

Levi Young: So, could we We've got these customized things here, but we can also do like scheduled ones as well, can't we? Like preset searches that would happen every week or month or or whatever. That's pretty easy to do, is it?

Al-khair Pama: Yep. Yep.

00:15:30

Al-khair Pama: Yep. But yeah,

Levi Young: Yeah.

Al-khair Pama: um I have some free question with this um lead finder.

Levi Young: Yep.

Al-khair Pama: So um since you've said it is scheduled, right? So how often is it like how frequent is it?

Levi Young: Well, I'm thinking like it's not as if we're selling like what we're selling is not as if it's like consumables or whatever. So, it's probably not as if it's a daily thing, but it's probably like um I was thinking monthly, but probably weekly just to scan of triggers from the previous

Al-khair Pama: Yeah. Yeah. Weekly.

Levi Young: week.

Al-khair Pama: Yeah.

Levi Young: Um

Al-khair Pama: But I think I'm thinking I'm thinking of like two weeks something like that because since you you your

Levi Young: yeah,

Al-khair Pama: business model is like B2B. So yeah.

Levi Young: yeah, yep, exactly.

Al-khair Pama: So

Levi Young: Um there's a couple of news journals. I'm assuming this would pick it up, but if not, I can give you login, our login to there's a a paper called the Australian Financial Review, which is all to do with business news and so forth.

00:16:25

Al-khair Pama: yeah,

Levi Young: I don't know whether there's a way for this to be able to log into that and scan it if if it's if it's or scrape information from it if it's got the login to it.

Al-khair Pama: Yeah.

Levi Young: Um or otherwise there's other subscription not subscriptions but just

reports that I get um um like headlines business news is one um mining.com is another one defense news. Yeah, there's like different industry news journals. I'm assuming this thing would probably pick that stuff up anyway just from its what it can do. But um yeah, I don't know if there's any specific login needed to help with that.

Al-khair Pama: Yeah. So um yeah I mean you can just give me those those um you know platforms name and if if it's I mean it does need some login right

Levi Young: Um the financial review would need a login. The others it would have the headlines which it could use as a prompt.

Al-khair Pama: so what's the name of that platform so I can search it now if

Levi Young: Um it's a afr.com is the website.

00:17:25

Al-khair Pama: not can you could you type it afi.com

Levi Young: Oh yeah. Yeah. Yeah.

Al-khair Pama: Huh?

Levi Young: Alpha alphabox tro. Uh, forgot what R is now. It's pretty handy,

Al-khair Pama: Uh,

Levi Young: isn't it?

Al-khair Pama: I don't know. Um, could you type it in the chat?

Levi Young: Like R for red. Uh, yeah, into the chat actually.

Al-khair Pama: Yeah. So,

Levi Young: Where is the chat?

Al-khair Pama: I can look it up because some some website do not do not really have

Levi Young: Um

Al-khair Pama: in integrators maybe. So we need some you know a bit of you know logic to to do this one like um we need we need we need we

Levi Young: um where's the chat? Sorry, I just can't find Yeah.

Al-khair Pama: need like like a a bot something.

Levi Young: B.

Al-khair Pama: Yeah,

Levi Young: Yeah,

Al-khair Pama: a bot.

Levi Young: exactly.

Al-khair Pama: Yeah, a bot that will automatically log in and then scrape some some things. But of course,

00:18:14

Levi Young: Yep.

Al-khair Pama: we still need to to to see if if they have as like a certain um like um you know legal stuff because we don't want to get banned. Yeah.

Levi Young: Yeah. Yeah.

Al-khair Pama: Oh yeah.

Levi Young: Um because there's a thing with Claude um Claude in Chrome as a like an extension. I've tried doing I've just had some issues getting it to connect but Marcus here in the office got it to work. Um, so I don't know whether that has the same functionality or or not, but um, anyway, that's something we can do some research on.

Al-khair Pama: Yep. Um API just finish it. content direct access is available through well they have their own Yeah. Yeah. I I I see. But um I think they they need to we still need to contact them like this one. Yeah. Like this one. Yeah. We have to like contact them if if you want to like integrate something. It's the same with um with the I forgot that the proper Australian property a property daily.

00:19:28

Al-khair Pama: Yeah.

Levi Young: Yeah. Yeah. Okay.

Al-khair Pama: Yeah.

Levi Young: So,

Al-khair Pama: So

Levi Young: the other thing Yeah. The other thing you can do with AFR is they do a daily paper which can be downloaded or viewed. So, if it's a way of it somehow logging in and downloading it, then it can just scan it without having to be through the website.

Al-khair Pama: yeah. No, wait a minute. Um let me see. So yeah, let me just review it. Um this weekend this AFR and then also the basically hope hopefully this this weekend this thing would be you know running and uh yeah and uh

Levi Young: Yep.

Al-khair Pama: yeah so what's the final scheduling do you think? So is it two weeks or every two weeks or like every month? So I think that would be we we are I we

Levi Young: That's Yeah. two weeks, you reckon?

Al-khair Pama: are two weeks or like one month that's the choices that I think is much efficient enough.

00:20:24

Levi Young: Yeah, let's start at two weeks and see how many it gets every two weeks. And then we if it's only getting like a handful,

Al-khair Pama: Yeah.

Levi Young: we can probably say let's do it once a month. But ideally what it would do is it would create enough leads for the team to or when I say enough like um it would create a list of

Al-khair Pama: Yeah.

Levi Young: leads that they would then chase down and close out and then get another list.

Al-khair Pama: Yeah. Yeah. So this this leadfinder has two mechanism like for example there's a there's an schedule type of running right but if If you choose to like run it

yourself,

Levi Young: Yep.

Al-khair Pama: you can like that.

Levi Young: Yes. Okay.

Al-khair Pama: Yeah.

Levi Young: Yep.

Al-khair Pama: So, so you still you still have the you still have the power to choose. And also um here's another question. Do you what what searching do you want? Like in this one in this um website, I mean in this um platform, you can search by a specific let's say a specific part of like Australia or do you Here's the thing.

00:21:27

Al-khair Pama: the tradeoff of searching throughout those four main you know main uh part of Australia is it's it's costly.

Levi Young: Yep. Yeah.

Al-khair Pama: Yeah. So I mean that about that about like I mean you can see you can check here the the approximation like $8 you know. Yeah. So if Yeah. So what do do you want like a full-blown research about those four or maybe what?

Levi Young: Let's do it a couple of times to start with with the full research just to see what it picks up and and I can

Al-khair Pama: Okay.

Levi Young: verify across, you know, what I've heard in the market and so forth as well just to compare it and that'll give us an idea of what it's

Al-khair Pama: Yeah. Yeah. Yeah. All right.

Levi Young: doing.

Al-khair Pama: So here's the thing.

Levi Young: Okay.

Al-khair Pama: So when the scheduleuler scheduler uh goes on like

Levi Young: Yep.

Al-khair Pama: the scheduleuler goes on and then it goes to our platform and then after some you know few research engine after getting some leads those leads will be thrown out thrown in basically to to HubSpot.

00:22:28

Al-khair Pama: So that's the the the basic process of this whole lead finder.

Levi Young: Yep. Yep.

Al-khair Pama: So hope you're clear with that.

Levi Young: Yep.

Al-khair Pama: Um yeah the scheduleuler is two weeks for now and u for now we we have we can like basically search um all all the cities and

Levi Young: Yep.

Al-khair Pama: uh yeah so yeah it it will thrown to Hopspot and with regards with what you've said from the p previous meeting like uh those overseas searching do you still need to to be with that or for now let's focus on Australia.

Levi Young: um as in companies that might be growing based overseas.

Al-khair Pama: Yeah.

Levi Young: You mean um no only if it's relevant to these cities like for example a global

Al-khair Pama: Yep.

Levi Young: company does an announcement it would be in Australia anyway that the announcement happens and they say um opening up an Australian headquarters in Melbourne um expected to have 200 staff by the end of the year or something like it would only be news um relevant to Melbourne like it wouldn't be just announced in America for example um and not Australia.

00:23:39

Levi Young: So if this search is picking up relevant headlines or um triggers in Australia, then that that would pick it up.

Al-khair Pama: Okay. Okay. That would be that would be great. Yeah. So,

Levi Young: Um yeah.

Al-khair Pama: um what Yeah. Is that is that all the the projects that you wanted to to talk about.

Levi Young: Um and then just to do with I guess we can develop it once we've got

Al-khair Pama: Yeah. Yeah. Yeah. Yeah.

Levi Young: this as we say but um ideally this whole HubSpot

Al-khair Pama: So, let's

Levi Young: input app would be something that everyone in the business has because what what we're having having at the

Al-khair Pama: Yeah.

Levi Young: minute is the business development team log calls and stuff on HubSpot but that's about where it stops whereas if we make it easy for everyone to upload every client interaction or conversation to HubSpot just through this note

Al-khair Pama: Yeah.

Levi Young: takingaking um portal so to speak like they get off the call and I say spoke with James um mentioned yeah thanks um and then they just press upload or press submit or whatever they don't have to worry about

00:24:48

Al-khair Pama: Yep.

Levi Young: logging into HubSpot and doing it just does it for them based on their HubSpot user and that way we

Al-khair Pama: Yeah.

Levi Young: overcome that issue But also for us BD or for the BD and sales teams, I think it would be great if this tool can be scanning their deal pipeline.

Al-khair Pama: Yep.

Levi Young: So in addition to the companies and reviewing and sort of giving them a task list basically for the day of saying, you know, this deal hasn't been spoken to for 3 weeks. Um this needs doing and you know this based on something we've heard or whatever. So that basically the whole pipeline management situation is managed through this.

Al-khair Pama: Yeah.

Levi Young: So yeah, I've got I've got very big ideas or very uh big thinking about this whole platform. So I'm quite quite excited about it.

Al-khair Pama: Yeah. Yeah. Me too. Me too, brother. Me too. So, um uh what's what's the Oh, yeah. The the signal high. I hope I hope uh

00:25:51

Levi Young: We can discuss that next week anyway.

Al-khair Pama: yeah, no no about the signal higher. Maybe you can create an account right now.

Levi Young: Oh yeah. Did you get that one? Did that one come through?

Al-khair Pama: Uh, I don't think that it it it has my email right now.

Levi Young: Yeah.

Al-khair Pama: Maybe you can follow up.

Levi Young: Um because I followed up with Marcus because he's got the login.

Al-khair Pama: Yeah,

Levi Young: I thought Okay, I'll follow him up now.

Al-khair Pama: maybe you can follow because Yeah,

Levi Young: Yeah, because um I told him to Yeah.

Al-khair Pama: because Yeah,

Levi Young: add add you to the account.

Al-khair Pama: because I think you're going like in Australia it's it's f almost five, right? So, yeah.

Levi Young: Yep.

Al-khair Pama: So,

Levi Young: Yeah. Yeah.

Al-khair Pama: might as well get the signal high done.

Levi Young: Um um before the uh for the day.

Al-khair Pama: And uh Yeah.

Levi Young: Yeah.

Al-khair Pama: Yeah.

Levi Young: Yep.

Al-khair Pama: So, I guess um Yeah, that's that's Yeah, it's been it's been a it's been a productive week.

00:26:46

Levi Young: Yep, that's where it's at.

Al-khair Pama: Yes, it's been a productive week,

Levi Young: Yep, it has.

Al-khair Pama: brother.

Levi Young: It's been good.

Al-khair Pama: Yeah. And um Yeah.

Levi Young: Excellent. No,

Al-khair Pama: And yeah,

Levi Young: good.

Al-khair Pama: hopefully this this weekend I can just um uh we can have um I can push it to the HubSpot successfully and create some workflows for it.

Levi Young: Yep.

Al-khair Pama: And uh yeah,

Levi Young: Yep.

Al-khair Pama: that's that's all I have to ask. And if if there's anything I can just, you know, message on the WhatsApp.

Levi Young: Yeah, I see a message. Yep.

Al-khair Pama: Yep.

Levi Young: Excellent. Thanks, Al. Really appreciate your help.

Al-khair Pama: Yep.

Levi Young: This is um been a good week.

Al-khair Pama: Yep.

Levi Young: Looking forward to next week and looking forward to this all coming together.

Al-khair Pama: Yep. Yep. Brother, thank you. Thank you. Thank you.

Levi Young: Have a good weekend.

Al-khair Pama: Yep. How good.

Levi Young: Cheers.

Al-khair Pama: Peace. Peace.

Levi Young: Thanks.

Al-khair Pama: Peace.

Levi Young: Thanks. Bye.
